Build it right. Connect fibre.

Installing fibre during construction helps:

- Prepare your build for fibre before residents move in
- Avoid post-handover retrofits
- Provide the connectivity that households expect

Single dwelling

Before booking, ensure the fibre tube is led-in from the boundary point to the exterior of the home.

When should you get in touch?
For installation around electrical fit-off, submit your request 4 to 6 weeks in advance.

*Free installation available for qualifying homes only. Learn more at **www.enable.net.nz/freeONTinstall**

The fibre ready process for single dwellings

Your fibre install journey, step by step:

Step 1:
Plan

Plan your fibre installation around the electrical fit-off stage of construction.

Step 2:
Apply

Get in touch early to help ensure fibre installation can be scheduled at the right time.

Request an install

Step 3:
Install

Our experienced Delivery Partners will complete the fibre installation. If access details are included in your request, you won't need to be on-site. Otherwise, they'll arrange access with the contact provided.

Step 4:
Job done

The new home is now fibre ready for residents to enjoy from the day they move in.

New to the process?

Sometimes you just need to talk it through with someone first. Give Emily a call and she can help you get clear on next steps.

Lead-in installation guide

What you'll do:

- Dig a trench from our access point on the boundary to where the External Termination Point (ETP) box will be located on the outside of the new dwelling.
- Install the Enable-supplied underground red lead-in tube.
- Install a Low Smoke Zero Halogen (LSZH) microduct from the ETP location to the in-home media panel.

What we'll do:

As part of proactive installation, we'll install the ETP on the outside of the house and the Optical Network Terminal (ONT) inside, either in your media panel or at your designated location.
